# IS IT THE END?

A Time of Great Mortality.

Especially Noticeable in Children. - Will Man Cease to Exist? - Can the

"Omega" be Averted? Why is it, with our improved sanitary appliances, our care to obtain fresh air, pure food, and plenty of exercise, the observance, in fact, of every hygienic law, that in spite of every sare each succeed-ing generation seems to become weaker and shorter lived? Is it that we are now suffering for indiscretions of our ancestors, or is that terrible, unknown end of man at hand?

Whatever the cause, the existing condition of things is too apparent. Especially is this noticeable with the babies. Instead of the mother's life-giving milk, they are compelled to begin a struggle for existence with the bottle. The result in many cases is disastrous. The little one, failing to obtain necessary nourishment, grows weaker daily, until death ends the struggle. The end in these cases is

Simply Starvation. With this termination so often the case, the best physicians of the day have resorted to the use of Bovinine, that great and original raw food product, as a means to save the babies.

In this connection Dr. A. B. Robinson, 61 Dudley St., Boston, after commending Bovinine most highly for various complieations where the waste of disease must be checked, and new blood, flesh, and strength created to effect a cure, says concerning this life-creating preparation, "With feeble, bottle-fed babies, a small amount added to the milk has in my practice saved many children." Bovinine is not a medicine, but

life-maintaining, flesh, bone, and bloodmaking preparation that contains the greatest amount of nourishment in the least possible bulk. Give it to the little ones while there is still hope. Your physician, if you ask him, will recommend it, and you will

bless the results obtained forever. Did you ever see one of the famous waterproof Interimed Collars or Cuffs? It's very easy to tell, for they are all

between the falling of the leaves in the autumn and the beginning of the sap flow in the spring.

C. Koch, a shoemaker living at 77 Pennsylvania avenue, found his pump frozen solid Thursday and proceded to thaw it out. He employed a new and original method of his own and would have succeeded admirably if neighbors had not interfered. He would also have succeeded in burning down his home. In order to thaw out the ice Koch piled a lot of straw about his pump and saturated it with coal oil. Then he touched a match to the outfit and went in the house to await results. Byron Myers, his next door neighbor, saw the situation and hurried over to find a lot of straw and weeds under the kitchen on fire and rapidly igniting the floor of the dwelling. He put out the blaze before any damage was done. C. Koch, a shoemaker living at 77 Pennsyl Schenectady, N.Y.

SEED DISTRIBUTION

The Proposed Change In the Method by the Department of Agriculture.

It has been proposed that all seeds, bulbs, shrubs, vines, cuttings and plants purchased and propagated by the secretary of agriculture, as required by law, shall be distributed to the agricultural Sow a Mixture of Grasses and Fertilizers experiment stations in the several states. Notes For Conservatory, Frames and Hotand territories, to be by them redistrib-As a good lawn once made is apt to uted to such persons as shall engage to remain undisturbed for years care should be taken to have the work properly make full tests of the same under the done, for if rightly done it will last for direction of the stations and to furnish years, and if slighted in the beginning the stations with written reports of ance and expense. In making a new lawn, after the ground has been thoroughly dug or plowed to the depth of ing should be accomplished before the propriated under the provisions of this done in bright, sunny weather. act as may seem to him advisable to enable the stations to purchase seeds, and must be guarded against. ment stations takes into account the fact | nights. It is claimed by those who ought to that the needs of different communities know that the double English violet is in this direction vary greatly. In many not only double, as the name indicates, states, particularly in the north and but entirely hardy. It is rich in color and excels in its delightful odor. This east, it is comparatively easy for the farmers to obtain seeds even of varieties variety will be welcomed by readers. gions of the south and west, on the other hand, there is great need for the introduction of better varieties than are now used or for experimental tests to determine what kinds of plants will grow best in those regions. It is therefore left with the secretary of agriculture to determine, after consultation with the officers of the experiment stations, to what extent seeds shall be distributed

in any particular locality. While under the present plan almost no reports of any value are received, the stations will be able to get many definite reports, and through the publication of results in their bulletins will not only carry direct information regarding the seeds distributed to the farmers, but will also call their attention to the desirability of the diversification of crops in many regions, and thus aid in the development of our agriculture. Along with the results of the test the stations will undoubtedly publish information regarding the proper enture and management of such plants as tests have shown to be useful in their respective localities.

Mental strongest, and if left run they support branchs and if left run they will draw the nourishment from all the result instructed grape pruner watches his vines during the season of growth and whenever any one branch is inclined to grow stronger than its neighbor it is either pinched back, in order to check its ambition, or else broken off entirely. The social problem of the "rich becoming richer and the poor poorer" applies here. We check the strong branch, and the weak er is strengthened thereby.

An Idea In Grafting.

Here is an idea in grafting that is practical and quick. It comes from Floration of the plants as tests have shown to be useful in their respective localities.

Horse Sense

Some people contend that a dog has meist wood and usually found in a heavy soil. A heavy soil is consequentlately upset in Belleville, N. J. A the scion at the lower end to correspond 4-year-old boy was thrown out of it directly under the feet of a horse that was passing at the moment, drawing a florand pot up into 2 inch pots all that are ist's wagon. The child fell exactly between the fore and hind feet of the stock of Sonvenir de Charles Turner and horse, so that a step of the iron hoofs would crush him. But the florist's ner is one of the best of the ivy leaved horse stopped dead still and did not section, a beautiful soft pink, and move till the child was picked up. One makes an immense truss of flowers. It cannot escape the conclusion that he is the most useful variety for hanging saw the accident, reasoned on it intelbaskets or vases, and when grown for ligently and decided that he must stop cutting purposes is most effective when in order to save the boy. In the face of used in centerpieces. Pierre Crozy is such manifestations of humanity, how indispensable as a bedding variety— can men and boys beat and starve horses dwarf in habit and very floriferous, and keep them tied up for hours with flowers of a bright scarlet. This advice cruel bits in their mouths? Even when emanates from American Gardening, a horse is well fed and cared for he must often be lonely for want of that companionship which should always ex-Here are other varieties that will give ist between man and his most useful satisfaction and are undoubtedly the servant. Talk to your horses, give them tidbits to eat, open a channel of communication between their understanding | the ordinary size for cleft grafting. No and yours, and you will be richly repaid. You will be astonished to find gain by this method is that one year's treatfully of matters pertaining to how much understanding your horse time is saved, as we do not have to wait double rosy pink. Single General Grant

Vermont, is introduced under the name One of the best points of the Green "New Imperial." Mountain grape is its earliness. The Wood ashes are particularly valuable Green Mountain is also hardy and profor use on lawns or in the fruit garden -for strawberry and bush fruits; also The horticultural society idea is

for fruit trees of all kinds.

If you want good putty, make it yourself, using linseed oil and whiting. Look out for weed seeds in your clover seed. There is no easier way to cover

your fields with noxious weeds. iment station puts the Kansas raspberry To kill moles soak some grains of at the head of the list of black caps, corn, sweet corn preferred, until soft. following it with the Gregg, Nemaha Then split the germ end with a penand Palmer, and accords the Turner the knife and insert a small quantity of strychuine. Then close the split and Grapevines may be pruned any time drop five or six grains in the freshly made runs of the moles. Spring is the best season for this work, writes an American Agriculturist correspondent.

A CORONER'S VERDICT.

Coroner McQuate was called to Massillon Friday alternoon to investigate the death of the infant child of Larry Steele, that was born some three months ago. When the coroner arrived at the house he found that all arrange ments had been made for the funeral and the funeral procession just ready to start from the house. He stopped the proceedings until he could make an investigation. He found that the parents had comployed no doctor to treat the little one while sick. The coroner called to his assistance Drs. Barnes, Miller and Hallock and had a post morten investigation. The doctors tound that the baby had died from convulsions. The coroner rendered a verdict of death from natural causes.

#### Pruning Grapevines.

That pruning is a great art, seldom mastered by even good gardeners, may readily be noted by the condition of which are new and rare. In certain re- grapevines in most places. All the lower portions of the main shoots are comparatively naked, and the few stronger branches grow from the upper portion of the vine, but a well pruned vine will be covered with strong branches from the base to the summit. This is really the leading object in grapevine proning, but not one in a hundred knows how to bring it about. It is wholly accomplished by summer pruning, says Mechan's Monthly. The upper branches are usually the strongest, and if left run her she saived 52 pounds in three months and got well. ing, but not one in a hundred knows

practical and quick. It comes from Florida and was sketched originally for Rural New Yorker:

Saw the tree to be grafted two more sense than a horse. But read the inches below the surface of the ground. following anecdote, and you will see Then, with a fine saw, cut a V shape ly best adapted to the violet, and none that certain horses at least have as much | three inches in depth | perpendicularly, surpasses that on which heavy sod was intelligence as any dog: A sleigh was tapering to a point at the bottom. Cut

with the cut in the stump, being care ful to make the bark of the scion match the inner bark of the stump; then pack the soil firmly about the graft and cover the stump level with the surface of the surrounding soil. Scions should be of has. It will grow and develop as you for the growth of new shoots on which to graft.

Effects of Mulching.

Readers are not all aware perhaps ding and blossoming of fruit trees in the spring. The condition of the roots has nothing to do with the development of the buds at time of development. The material for their increase is already in the tree from the previous year's growth. A grapevine, if the branches of it be led into a greenhouse, will put forth buds and leaves in winter, though the ground be frozen hard around its roots. Covering strawberries will retard development, because the whole plant is kept from heat and light. Trees also could be held back if they could be entirely covered by the mulch,

Caladium esculentum, cannas and dormant tubers should be potted, if not already done, and stood under the benches of a moderately warm house. By doing this you will get a longer season of growth and beauty.

-Farmers' Review.

TUBERCULOSIS DETECTER.

Doctors Blanchard & Bowman on Saturday received from the Biological institute of New York a bottle containing tuberculin for the detecting of consumption or tuberculosis in extile. There are a number of cattle in this section that it is feared have tuber-culosis and as the milk from such is very apt to induce consumption in persons who use it, it is of great importance that the facts be known. Tuber-culin is a new medicine that is injected in the cattle hypodermically and by noting the temperature it can be certainly ascentized when perature it can be certainly ascertained whether the cattle have the disease or not. The medicine costs a dollar a dose.

A daily newspaper whose local news is com-plete and reliable, never fails to have an excollent class of readers.
